RR6403 Foldable Antenna Mast

The antenna mast RR6403 is primarily intended for use for elevating and mounting of a light directional, omni-directional or wire antennas for mobile work. The base mast unit has a special three-legged support made of aluminium alloy square tubes, with telescopic support legs, made of composite material (glass reinforced polyester tubes). In normal conditions the mast does not need additional ropes and anchors. The three-leg stay is designed for very quick elevation of the mast even on inclined ground. The mast is packed in handy linen bag. Standard mast height is 6 m (4 sections of 1.5m), but different dimensions are also available on special request.

Height	6m
Mass of three-legged Support	6kg
Mass of Each Mast Sect	1.5 kg
Number of Sections	4
Length of Sections	1400 mm
Diameter of Sections	60mm
Mounting area	D = 2.8 m
Mounting time	1 person /5 minutes
